

GWME-7.2.0-3 Importing RRDs

Problem

This technical bulletin applies to GroundWork Monitor 7.2.0. On GroundWork systems failure occurs when importing RRD data that occurs before the cutoff date. This fix now displays a correct error message and always rejects RRD input when it matches current influxDB data.

Solution

To address the problem above, we are providing an updated `grafbridge-control` script file.

Installation steps

1. Download the `TB7.2.0-3.tar.gz` tarball below and place in an accessible location on your GroundWork Server.

Name	Size	Creator	Creation Date	Comment
 TB7.2.0-3.tar.gz	37 kB	Bren Eckles	Jun 01, 2018 19:51	

2. Unzip the tarball:

```
tar zxvf TB7.2.0-3.tar.gz
```

This will create the sub-directory TB7.2.0-3.

3. Change to the `TB7.2.0-3` directory:

```
cd TB7.2.0-3
```

4. As `root` user run install:

```
./TB7.2.0-3_install.sh
```

Uninstall rollback steps

1. As `root` user, in the Technical Bulletin directory (e.g., `TB7.2.0-3`) run uninstall:

```
./TB7.2.0-3_uninstall.sh
```
