

# How to interact with Grafana graphs in Status (Quick Start)

WAS THIS PAGE HELPFUL? [Leave Feedback](#)

## Overview

You can interact with embedded Grafana graphs in the Status application.

## Steps

1. Log in to GroundWork Monitor as an **Administrator** (e.g., admin/admin).
2. Go to **Status**, select a **service** (e.g., local\_load), hosts also offer graphs via *Host Availability & Performance Measurement*.
3. Expand **Service Availability & Performance Measurement** to view the graph.
  - **Metrics** - As the cursor is moved across the graph, values are shown for the underlying data. By default, warning and critical thresholds are rendered. To view graphs without these values, simply click a metric in the legend. Shift-select can be used to select multiple metrics.
  - **Zoom Region** - Zoom in by creating a zoom region with the cursor, and zoom out with Control-z.
  - **Annotations** - GroundWork events are represented as vertical dashed lines called annotations. Critical/Warning/OK events are in red/orange/green. Audit events for this service are in blue.
